Dassault Aviation's versatile large cabin twin will be Beijing Red Cross Emergency Medical Center's first fixed wing aircraft dedicated to medevac services.

Beijing Red Cross Medical Center is buying a Falcon

2000LX, outfitted with an electrically powered patient loading system, a stretcher and full medical suite with patient lighting, triple bottle oxygen supply, and health monitoring sensors and instrumentation. The medevac configuration also will accommodate an electro-cardio graph, a defibrillator and blood/body fluid transfusion equipment.

The special medical kit is being installed by Dassault Aircraft Service in Wilmington, Delaware, with customer delivery slated for September. Dassault Falcon 2000LX has a nearly 4,000 nm range with a 1,600 lb. payload, along with low takeoff and landing speeds and the ability to operate from airport elevations as high as 12,000 ft.

Falcon 2000LX is a well proven platform. More than 170 aircraft are in service around the globe.
